

PARADOR

Technical leaflet:

Engineered wood „Natural oiled plus finish“

Ranges: Classic / Trendtime / Edition

Ingredients

Parador „Naturöl Plus“ has a biogenic share of > 90 % (e.g. linseed-, soya- and rapeseed oils).

Properties

„Natural oil plus“ is an open-pored surface treatment based on natural plant raw materials. During the factory treatment the oil penetrates the wood and the wood surface retains its natural appearance and texture. After hardening, the surface is breathable. The engineered wood floor therefore can contribute to a balanced moisture content and a healthy indoor climate. Humidifiers are necessary, however, if the indoor climate tends to be too dry. (approx. 30-65 % rel. humidity = pleasant indoor climate).

Resistance

The „natural oil plus“ is tested in accordance with EN 13442 (determining the chemical resistance of wood floors) and classified in group 5 – no visible changes (excepting for ammonia solution (group 2)). You can find further information about the usage properties of the Parador floor on the technical datasheet for the product in question.

General information

Clean the floor after laying and at future intervals with a vacuum cleaner (attached brushes) and/or broom). Wipe off localised dirt with a damp cloth. We recommend to use the Parador care set with special maintenance and cleaning products for persistent dirt as well as for regular maintenance and value preservation. Steam cleaners, scouring powder, scouring milk or other abrasive cleaning products must not be used. Use entrance mats and fit soft felt pads to furniture and chairs. Only use office chairs with soft castors and lay standard protective mats in the castor area.

Initial care treatment / Maintenance / Repair

An initial care treatment must not be carried out. Regular maintenance is nevertheless necessary for the long-lasting value preservation of the floor (depending on the use).

In addition to the recommended products of Parador, which can be found in the price list, various oil-, oil/wax- or wax-systems are available on the market. The Parador finish „natural oiled plus“ can be treated with standard cleaning and care products for air-drying or oxidative-drying naturally oiled surfaces. You should decide for a system.
